OVERVIEW

Final-year Computer Science (AI) student who enjoys working across the full stack — from Java/MySQL backends to Flutter/Firebase mobile apps — and has picked up applied AI/ML experience through an internship. I like taking projects from a rough idea to something that actually works end to end, which is how most of what's below got built: not for a class, but because I wanted to see if I could. Looking for a full-time role where I can keep building in web and AI-driven development.

TECHNICAL SKILLS

Languages: Python, Java, SQL, Dart, Embedded C

Full-Stack / App Development: Flutter, Firebase (Firestore, Auth), MySQL, front-end & back-end fundamentals

AI / ML: Prompt engineering, ML fundamentals (classification, dataset preprocessing), AI workflow pipelines

Embedded / IoT: Arduino, NodeMCU (ESP8266), GSM modules

Tools: Git, VS Code, Eclipse, debugging

Soft Skills: Communication, teamwork, adaptability, attention to detail, time management, leadership

PROJECTS

Remote IoT Motor Control System — *Arduino, NodeMCU (ESP8266), GSM (SIM800/900) — self-initiated*

- Designed and built a system to start and stop a three-phase AC submersible pump motor remotely, over GSM (DTMF) and a WiFi web interface, wired into an existing industrial DOL starter panel.
- Worked through real hardware-software integration issues along the way, including single-phasing protection, relay-based START/STOP simulation, and contactor/thermal-overload wiring.
- Took it from concept to a fully documented, working solution on my own initiative, with complete source code.

CareFlow — Smart Hospital OP Booking System — *Flutter, Firebase* Nov 2025 – Jan 2026

- Built a full-stack mobile app for outpatient appointment booking and patient record management, covering both the front-end UI and the back-end data logic.
- Used Firebase Firestore for real-time data sync and Firebase Authentication for secure user access.
- Designed the Flutter UI and handled doctor availability and patient queues with real-world scalability in mind.

EDUCATION

Saveetha School of Engineering 2023 – 2027
Bachelor of Engineering in Computer Science (AI) — CGPA 9.0/10.0 · Chennai, India

KrishnahChaithanya Junior College 2021 – 2023
Intermediate — CGPA 9.71/10.0 · Nellore, India

ZPHS EM High School 2020 – 2021
Class X — CGPA 9.8/10.0 · Mudivarthi, India

CERTIFICATIONS

- Oracle Certified — Java, Database Management
- Python Basics Certification — core programming concepts and structured, efficient Python code
